Office Action

Restriction Requirement:

Applicants election of Invention III, now represented by claims 19-66 in paper number 8 filed 8/3/01, is acknowledged. The election has been treated as an election without traverse (MPEP § 818.03(a)), based on an incomplete response.

Applicants newly filed claims are drawn to several patentably distinct inventions. Thus, further restriction *within* the formerly presented Invention III is required, as follows:

Applicant is required to elect a single invention, selected from the following groups:

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 19-60, drawn to an antibody and composition comprising, classified in class 530, subclass 387.1+.
- II. Claims 61 and 62, drawn to a method of producing an antibody, classified in class 424, subclass 184.1+
- III. Claims 64-66, drawn to a method of detecting a polypeptide, classified in class 424, subclass 130.1+

Groups I and II are related as process of making and product made. The Inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product, or (2) that the product as claimed can be

Art Unit: 1647

made by another and materially different process (MPEP § 806.05 (f)). In the instant case an antibody to a polypeptide can be made in several ways.

Inventions I is related to Invention III as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05 (h)). In the instant case the polypeptide can be detected by means other than an antibody, such as by a fluorescent lectin conjugate.

Inventions II and III are independent and distinct, each from the other, because the methods are practiced with materially different process steps for materially different purposes and each method requires a non-coextensive search because of different starting materials, process steps and goals.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 37 C.F.R. § 1.48(b) and by the fee required under 37 37 C.F.R. § 1.17(i).
